

Software Tester (QA)

Company Description

Digiflux Technologies, based in Vadodara, is a leading provider of comprehensive digital solutions. We specialize in developing Web and Mobile Apps, as well as delivering innovative end to end digital solutions tailored to various organizational needs.

Role Description

We are looking for an experienced Software Tester (QA) with **2 to 3 years** of experience to join our team at Digiflux Technologies in Vadodara. This is a full-time, on-site position. The ideal candidate will have strong expertise in manual Software Testing (QA), along with hands-on experience in testing applications to ensure high-quality standards and contribute to the overall success of the software development lifecycle. As a Software Tester, you will work closely with developers, business analysts, and other stakeholders to identify defects, ensure the product meets business requirements, and enhance the user experience. Additionally, you will be responsible for understanding project requirements, creating use-full documentation and planning micro-tasks based on project needs.

Key Responsibilities

- Develop and execute detailed, comprehensive, and well-structured test cases based on project requirements, user stories, and business specifications.
- Ensure coverage of all application functionality through manual testing, including functional, regression, and integration testing.
- Identify, log, and prioritize defects, providing clear and actionable details to the development team for resolution.
- Track and manage defects through to closure, ensuring effective communication regarding the status and resolution of issues.
- Work closely with developers, business analysts, and product managers to understand application functionality and business requirements.
- Participate in requirement reviews, sprint planning, and daily stand-up meetings to stay aligned with team goals and priorities.
- Perform regression testing to ensure new changes or enhancements do not negatively impact existing features.
- Verify fixes for reported defects and perform retesting to validate successful resolution.
- Create and maintain detailed test plans, test cases, and test result documentation.
- Contribute to the improvement of testing processes and best practices to enhance the overall quality and efficiency of testing activities.

- Participate in the estimation of testing efforts, providing accurate time and resource estimates based on project requirements.

Good to Have

- Familiarity with AI-powered testing tools and the use of AI to improve test case generation, defect analysis, and overall QA efficiency is a plus.
- Basic understanding of test automation frameworks such as **Selenium, Cypress, Playwright, or Appium** to support automation testing initiatives.
- Experience using AI tools (e.g., **ChatGPT, GitHub Copilot, Gemini**) to assist with test case creation, bug analysis, test data generation, and documentation.
- Awareness of AI-assisted QA practices, including intelligent test execution, self-healing test scripts, and predictive defect analysis.

Additional Information

- The role is based in **Vadodara** and requires a **full-time, on-site** presence.
- Opportunities for professional growth and development within a dynamic and innovative company.
